Syntax Syndicate

ClearTrace

Find exposures. Understand risk. Track removal.

UI · Backend · Database · Scanner · Removal Engine · Integration

Made with GAMMA

Scattered details create connected risks

- Personal information is fragmented across directories
- Combinations reveal hidden attack paths
- Removal tools can feel like a black box

A phone number + an employer can enable a more convincing targeted message.

Made with GAMMA

From matching to meaningful action

Find

Fuzzy matching

RapidFuzz finds possible identity matches in synthetic directories.

Understand

Harm Map

Connect exposures to possible attack vectors.

Track

Proof Ledger

Follow removal stages with timestamps and redacted evidence.

Possible match ≠ confirmed identity. Request sent ≠ confirmed removal.

Made with GAMMA

One pipeline connects the interface, API, and data

React

Vite · Tailwind

Identities · Findings · Consent · Ledger

Persistent records

Scan → Review findings → Authorize individually → Follow status

Made with GAMMA

Make risk and removal progress visible

Phone exposure can also be relevant to SIM-swapping risk.

Timestamped, immutable audit log with redacted evidence

Possible attack paths, not predictions. Confirmation is scoped to recorded evidence.

Made with GAMMA

Six roles, one integrated workflow

UI

Schema and ledger

Scanner
Finding and matching

Removal Engine
Authorization and requests

Integration
End-to-end wiring

Made with GAMMA

Demo: scan, authorize, and verify

01

Scan

Scan synthetic directories and open the Harm Map.

02

Authorize

Review an eligible finding and authorize it individually.

03

Verify

Inspect the ledger and rescan the synthetic source.

Below 75% confidence

RapidFuzz matches are blocked from automatic removal selection.

Verification covers only the source included in the rescan.

Made with GAMMA

Next: real integrations and continuous monitoring

Real-world directory APIs

Integrate where available

Extend beyond the controlled synthetic-directory workflow.

Continuous monitoring

Spot reappearance

Add monitoring and reappearance alerts over time.
